

## Curvifocus with enhanced thermal protection

Available immediately

Delivery time: 7 weeks from the signed drawing agreement

Price: consult the current price list

Available finish: matte black

---

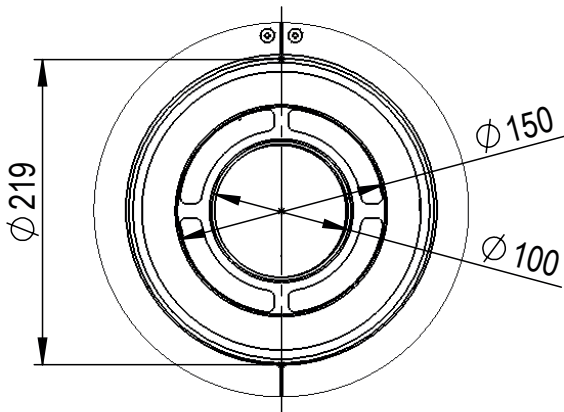

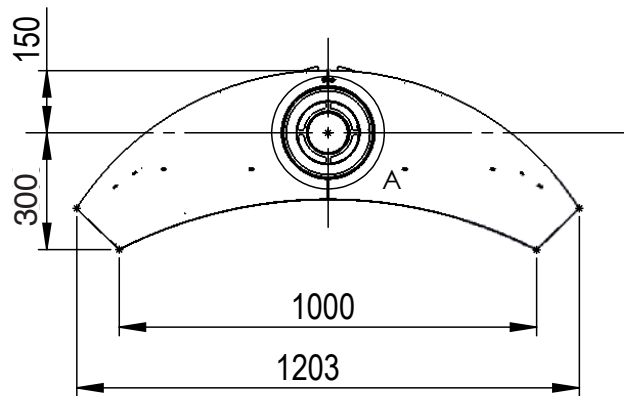

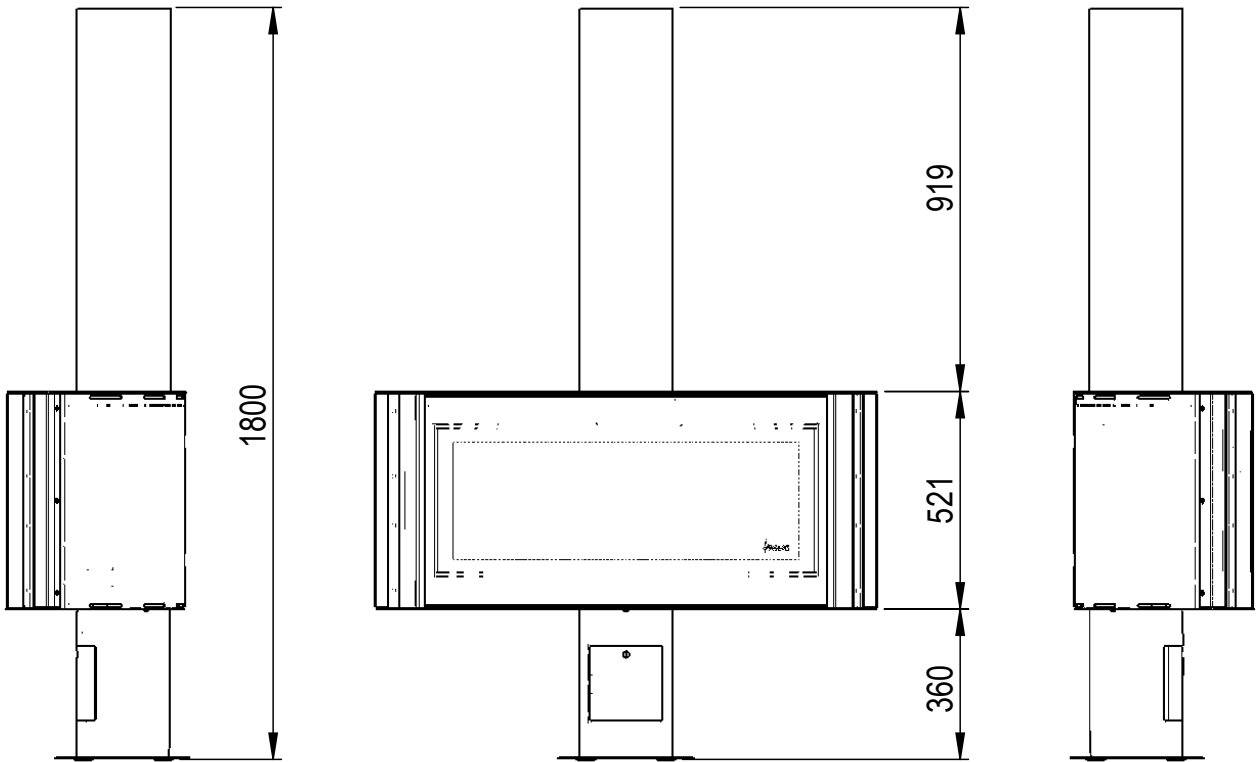

In order to meet specific requirements such as those for establishments receiving the public (ERPs) and certain export markets, we have developed a Curvifocus with enhanced thermal protection by adding:

- a protective guard in front of the glass panel
- an insulating layer of ceramic fibre on top of the hearth
- an optimized flow of convection air at the back and sides of the hearth.

Both versions of the Curvifocus are available for sale. The choice must be made when the model is ordered as it is not possible to subsequently adapt the hearth by adding these thermal protection features (not even the protective guard for the glass).
